

Positive Mindset towards ISM

(ISM = Information Security Management)

As the saying goes “Prevention is better than cure”. Let’s prevent the breach of security information rather than paying the fine or losing the trust of customers. This workshop would help spark the change of mindset and steps needed to sustain security information in your company.

Target Audience:

Senior management, appointed data protection officers, staff who handles security information, such as Human Resource, IT, Marketing, Sales, Customer Services, Operation and etc. from all industries.

Workshop Objectives:

- Create awareness of the importance of security information
- Understand the current gaps in the company for security information
- Steps in creating the culture for information security
- How to sustain the positive culture?

Workshop Outline:

- **PDPA Outline**
 - Understanding the fundamental of PDPA
 - Why is it important to follow PDPA?
 - The 9 obligations of the PDPA
 - Proper steps in managing PDPA
 - Case studies of data breaches
- **Understanding your company**
 - The result from the Security Risk Assessment
 - Understanding the current gaps
 - Creating preventive measure and proper habits
- **For a Better Future**
 - Brainstorming as a group: improving on the current situation for a better future by creating guidelines and rules.
- **Simple Assessment**
 - Questionnaire regarding information security
